DETAILED ACTION

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Applicant's arguments filed 4/28/08 have been fully considered but they are not persuasive. Claim 9 has been cancelled.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Ashomko et al (SU 578336 A; 11/3/77). Ashomoko et al teaches an ensilaged crop. See abstract.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6 and 12 are rejected. Claims 6 and 12 are product-by-process claims for making ensilaged crop. However, claims 6 and 12 depend from claims 1 and 7, respectively, which do not appear to clearly set forth active steps for producing

ensilaged crop.

Allowable Subject Matter

Claims 1-5,7,8,10 and 11 are allowable. The prior art does not teach or suggest the instant method of contacting a crop material with o-diphenol compound and polyphenol oxidase.
